#3 – support custom token "BracketedSpan"

Reported by @UnquietCode Milestone: Version 2

$Supportanewspantoken"BracketedSpan".Whichlookslike:\texttt{[text]}\{\texttt{metadata}\}$
• ✓ implement a new token class
• □ pass token to our renderer on init
\bullet \Box define a new render method <code>render_bracketedspan</code> (or maybe <code>render_bracketed_span</code> which will be invoked by mistletoe
ullet for now render it in latex by just rendering the text part, ignoring the metadata
• 🗆 test that it renders
